## Blue Dissipative Cart Cover

Blue translucent static dissipative covers are designed to protect product and equipment from ESD damage. Electrical properties of the static dissipative vinyl are: surface resistivity –  $10^{10}$  –  $10^{11}$  ohms per square per ASTM-D257. They are ideal for production area carts. Covers keep contents clean and discourage unauthorized personnel from tampering with contents. Covers also provide an economical enclosure for burning-in electrical components and equipment.

Also available with zippers or Velcro®, pockets, imprinting, and reinforced corners.
